This brief webinar details what new information these first three drill holes provide and what the Company is hoping to expect on the subsequent 20 holes whose results are still pending. The webinar also discusses the calculations that go into copper equivalent grades and references global and Canadian average copper grades for open pits.

Notable intersections from Power Ore’s June 14 news release include:

- **1.41% copper equivalent over 58.1 metres** starting at 49.9 metres down hole including 5.9% copper equivalent over 8.5 metres in hole OPM-19-02
- **0.72% copper equivalent over 23.6 metres** starting at 51 metres down hole including 1.47% copper equivalent over 7.1 metres in hole OPM-19-01 (Twinned Hole of Historical Falconbridge Hole S-807)
- **0.24% copper equivalent over 79 metres** starting at 33 metres down hole including 0.51% copper equivalent over 25.7 metres in hole OPM-19-03 (at the rhyolite contact, previously thought to be unmineralized)

*Copper Equivalent (“Cu Eq.”) grade including copper, gold, silver, cobalt and zinc based on 100% recoveries is calculated using the following equation: $Cu\ Eq. = [(Cu\ \% \times 20 \times Cu\ price) + (Au\ grade / 34.2857 \times Au\ price) + (Ag\ grade / 34.2857 \times Ag\ price) + (Co\ \% \times 20 \times Co\ price) + (Zn\ \% \times 20 \times Zn\ price)] / (20 \times Cu\ price)$. We used Cu, Au, Ag, Co and Zn price of US\$2.65, US\$1,325 and US\$14.75, US\$15.00 and US\$1.15 respectively.
